Solution Manager is ending. Your CUA stays.

Are you running your Central User Administration (CUA) on a SAP Solution Manager client? Then your central system needs to move. Xiting analyzes your starting situation free of charge and handles the migration to a new, future-proof central system.

SAP Solution Manager: End of maintenance

31.12.2027

A migration takes lead time. Those who start in 2026 can work at a relaxed pace.

ACTION REQUIRED

Why now is the right time

SAP has discontinued the Solution Manager – not the CUA. Your central system needs to move, your user administration does not.

The only thing to clarify is which system will become the future central system: an existing production system or a dedicated client. This decision determines the timeline – which is why it should come first.

OUR OFFER — In the XCW starter package

We handle the migration

Xiting transfers your CUA to a new, future-proof central system. You become independent of the Solution Manager, your user administration remains stably available, and you lay the foundation for its long-term modernization.

Scope. The move is carried out with unchanged configuration – same target systems, same identities.

Your path in three steps

Step 01 — CUA Check

Free

Five questions about your starting situation, about two minutes. We'll get back to you promptly with an initial assessment. Everything else we clarify together in a follow-up conversation.

- Scope of the move
- Recommendation for the central system
- Statement on takeover

Step 02 — Migration

Included in the XCW Starter Package

We decommission your existing CUA and set it up fresh on the new central system: RFC setup, user takeover, test cycle, documentation. Afterward, you're independent of the Solution Manager.

Step 03 — Modernization

Your real payoff

Xiting Central Workflows uses the same infrastructure as your CUA and adds what it doesn't offer:

- Approval workflows
- Complete audit traill
- Automatic SoD (Segregation of Duties) checks

THE FIVE QUESTIONS FROM THE CUA CHECK

- ? Do you run a Central User Administration?
- ? How are you handling the end of maintenance?
- ? How many user pools are managed in the central system?
- ? How many clients are connected to the CUA?
- ? Is your CUA central system running on the Solution Manager?

Start with the CUA Check

The answers determine the migration. Two minutes, free, and no obligation. Anything beyond that – processes, data quality, ticketing system – we'll address together in conversation.
